Important User Information

Solid state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (Publication SGI-1.1 available from your local Rockwell Automation sales office or online at <http://literature.rockwellautomation.com>) describes some important differences between solid state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc. is prohibited.

Throughout this manual we use notes to make you aware of safety considerations.

WARNING 	Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.
IMPORTANT	Identifies information that is critical for successful application and understanding of the product.
ATTENTION 	Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you identify a hazard, avoid a hazard, and recognize the consequence.
SHOCK HAZARD 	Labels may be on or inside the equipment to alert people that dangerous voltage may be present.
BURN HAZARD 	Labels may be on or inside the equipment to alert people that surfaces may be dangerous temperatures.

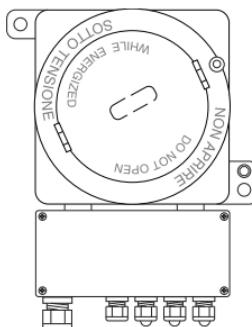

ATTENTION

This equipment is considered Group 1, Class A industrial equipment according to IEC/CISPR Publication 11. Without appropriate precautions, there may be potential difficulties ensuring electromagnetic compatibility in other environments due to conducted as well as radiated disturbance.

This equipment is supplied as enclosed equipment. It should not require additional system enclosure when used in locations consistent with the enclosure type ratings stated in the Specifications section of this publication. Subsequent sections of this publication may contain additional information regarding specific enclosure type ratings, beyond what this product provides, that are required to comply with certain product safety certifications.

About the Power Supply

1797-PS1E

30686

The power supply is an essential component in the operation of an intrinsically-safe system. It must isolate the unsafe incoming power from the control system and limit the available energy to IS-safe levels.

No other power source is needed to operate any components attached to the FLEX Ex system in the hazardous area. Power for valves, actuators, or transmitters come from the FLEX Ex modules.

4 FLEX Ex 85...253V AC In/Quad-Ex DC Out Power Supply

The 1797-PS1E is an 85...253V AC in/quad-Ex DC out power supply in a flame-proof enclosure with increased safety input/output terminations. The 85...253V AC gland is an M20 x 1,5 and can accept a cable from 6...12 mm (0.267...0.472 in.) in diameter. The Ex outputs are M16 x 1,5 and can accept a cable from 4...8 mm (0.157...0.315 in.) in diameter.

Features include the following:

- 85...253V AC supply source
- Four channels, 8.5 W output each channel
- Outputs are IS galvanically isolated from the source
- All channels are independently IS limited

Understand System Planning

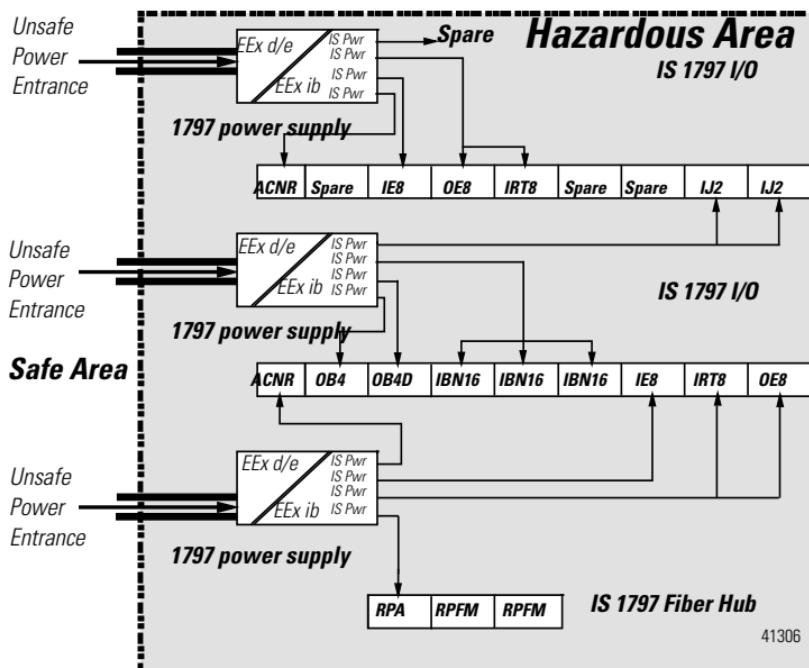

Part of system planning is determining what modules are needed for the application, how many power supplies are needed, how to best partition the system, and where to locate the system cabinets.

A key task in the development cycle is determining the number of power supply outputs (thus power supplies) you will need. In the following example, you will need 11 power outputs if you are using the fiber hub, which requires 8.5 W.

Modules	Requires	Modules	Requires
Fiber hub	8.5 W	Two thermocouple inputs	1.6 W each
Two ControlNet adapters	8.5 W each	Two digital outputs	7.5 W each
Two analog inputs	7.5 W each	Three NAMUR digital inputs	2.8 W each
Two analog outputs	6.3 W each	Two counter inputs	4.25 W each

Each power supply has four independent IS-power outputs capable of 8.5 W each. In the above example, we required 11 IS-power outputs so 3 power supplies were sufficient.

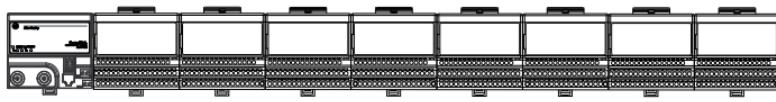

The total number of power supplies needed depends on the modules used and the total system configuration. The following illustration shows how this example may be configured.

**IMPORTANT**

Even though modules may be supplied with power from the same power-supply output channel, galvanic isolation in the module provides module-to-module galvanic isolation. Depending upon the module type, galvanic isolation (channel-to-channel within the module) may or may not be provided. See the module's specifications for more information.

6 FLEX Ex 85...253V AC In/Quad-Ex DC Out Power Supply

Make certain that you only connect intrinsically-safe power supplies to other intrinsically-safe system modules or adapters to maintain the integrity of the intrinsically-safe backplane.

Installation in Zone 1, 22

The 1797-PS1E Series B power supply has a protection factor of IP65. Refer to the specifications table for the IS module type.

ATTENTION

The power supply cannot be used in an intrinsically safe environment after its outputs have been exposed to nonintrinsically safe signals.

Application

When installing, commissioning, operating, and maintaining devices or device components of the FLEX Ex system as intrinsically-safe electrical apparatus in potentially explosive atmospheres according to EN 50020, you must heed the EC-type examination certificate and the applicable national and local construction, installation, and operating regulations.

Zone 1

The Power Supply unit can be located in Zone 1. The permissible ambient temperature of -20...70 °C must not be exceeded.

Zone 22

The housing type of the power supply is applicable for use in Zone 22. It corresponds with the category 3D acc. to directive 94/9 EC and is marked with a type label accordingly.

Installation and Commissioning

The power supply unit can be located in Zones 1, 2, and 22 as stated on its label. The output circuits are according to the ignition protection class EEx ib and can be installed in Zones 1, 2, and 22. When installing, you must heed the EC-type examination certificate (especially the special conditions) and the applicable national and local construction, installation, and operating regulations.

The housing (EEx d) must not be opened (screw cover). Connections are made in the EEx e terminal box.

Install the Power feed lines only in the deenergized state. Also follow the information on the type label, respectively the covers of the terminals.

You can connect and disconnect the intrinsically-safe output terminals during operation.

All unused cable glands must be covered by appropriate prototype tested EEx e lead seals to keep the requirement of IP54.

The cover installed on the nonintrinsically-safe screw terminals (IP30) may only be removed in the deenergized state and must be remounted after working on these terminals.

Before closing the cover of the EEx e wiring box, inspect the seal for any signs of damage. In case of damage, the seal must be replaced by a new seal that is identical to the damaged seal.

The power supply housing contains two flanges, which can be connected to a wall or other structural part by means of fixing screws. Select fixing screws that ensure secure fixing of the power supply. Consider the condition of vibration of the power supply when making this selection.

On the EEx d housing there is an earthing screw. This screw must be connected to Earth with a conductor having a minimum of 4 mm^2 (0.006 in.^2) area. The connection has to be protected against self opening and corrosion. Corrosion protection can be achieved by using tinned terminal ends.

Before opening the EEx e terminal box (for example, for maintenance purposes), it must be cleaned of all dust particles to ensure that no dust can enter the box.

8 FLEX Ex 85...253V AC In/Quad-Ex DC Out Power Supply

Electrostatic Charge

Protect the system against electrostatic charge. Post a sign near this module.

Attention! Avoid electrostatic charge.

**ATENÇÃO! PREVENIR CONTRA O ACÚMULO DE
CARGA ELETROSTÁTICA**

For your convenience, a sign that can be cut out and posted is included on the last page of these installation instructions.

European Hazardous Location Approval

The following applies to products marked **CE Ex II 2 G**

- Are Equipment Group II, Equipment Category 2, and comply with the Essential Health and Safety Requirements relating to the design and construction of such equipment given in Annex II to Directive 2014/34/EU. See the EC Declaration of Conformity at <http://www.rockwellautomation.com/products/certification> for details.
- The type of protection is “Ex de [ib] IIC T4 Gb” according to EN 60079-11.
- Comply to Standards EN 60079-0:2012, EN 60079-1:2007, EN 60079-7:2007, and EN 60079-11:2012, reference certificate number DMT 02 ATEX E 253 X.
- Are intended for use in areas in which explosive atmospheres caused by gases, vapors, mists, or air are likely to occur occasionally. Such locations correspond to Zone 1 or 2 classification according to ATEX directive 2014/34/EU.

IEC Hazardous Location Approval

The following applies to products with the IECEEx certification:

- Are intended for use in areas in which explosive atmospheres caused by gases, vapors, mists, or air are likely to occur only infrequently and for short periods. Such locations correspond to Zone 1 or 2 classification to IEC 60079-0.
- The type of protection is “Ex de [ib] IIC T4 Gb” according to IEC 60079-11.
- Comply to Standards IEC 60079-0:2011, IEC 60079-1:2007-04, IEC 60079-7:2006-07, and IEC 60079-11:2011, reference IECEEx certificate number IECEEx BVS 09.0019X.

Special Conditions for Safe Use:

For an ambient temperature above 60 °C, power supplies must be connected with leads that are designed for a service temperature of at least 80 °C.

Outputs

When using an intrinsically-safe electrical apparatus according to EN50020, the European directives and regulations must be followed.

The channels in the power supply are electrically connected to each other and have a common +V line.

IMPORTANT

You cannot interconnect lines because of the intrinsic safety requirements.

Mount the 1797-PS1E Power Supply

Follow these directions to properly install the 1797-PS1E power supply. Refer to Installation and Commissioning, page 7, for important precautions and considerations.

ATTENTION

Use star washers and nuts to make sure you have a good electrical connection. Scrape the paint off the back panel in those areas where grounding bolts will be located.

1. Remove the screws on the cover of the power supply EEx e terminal box to access the input and output terminals.
2. Thread the blue IS-safe output power wiring through the blue IS compression seals.
3. Connect the blue IS-safe output power wiring to the output terminals making sure all connections are tight.

These power supply outputs provide the input power to the FLEX Ex modules.

4. Thread the hazardous incoming power wiring through the black compression seals.
5. Connect the hazardous incoming power wiring to the input terminals making sure all connections are tight.

You can daisy chain the hazardous incoming power wiring to further supplies to simplify system wiring.

ATTENTION

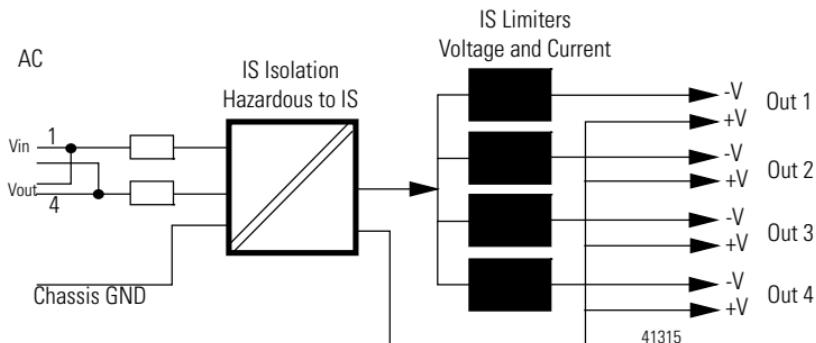

Keep hazardous and IS-safe wiring separated in a suitable fashion. Do not leave long, excess wiring that could bridge between the hazardous and safe areas.

6. Replace the lid of the EEx e terminal box.
7. Screw the lid back into place making sure all of the screws are tight.

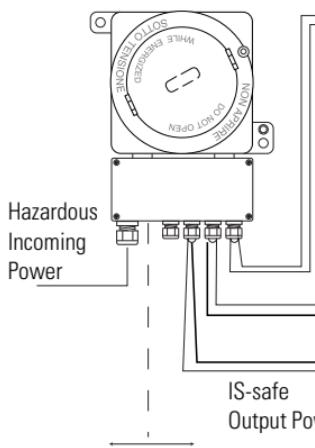

Customer Connections

Type of Power Input

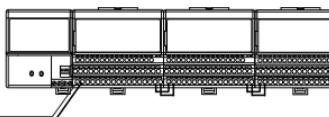

Typical Wiring Configurations

1797-PS1E

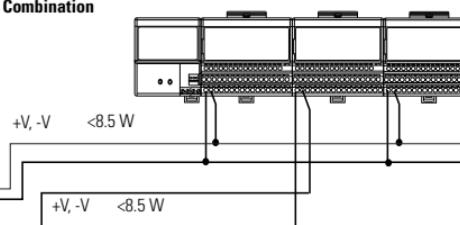

Daisy-chaining

You can use the daisy chain configuration if the total module power draw is < 8.5 W. Otherwise, power is connected to individual modules.

Combination

Wiring when total module current power is greater than 8.5 W.

Other variations are possible depending upon individual module power.

Repair

The power supply is not field-repairable. Any attempt to repair this power supply will void the warranty and IS certification. If repair is necessary, return this power supply to the factory.

Specifications

Table 1 FLEX Ex Power Supply - 1797-PS1E

Attribute	Value
Input connectors	85...253V AC, Um = 253V AC Terminals 1, 2, 4, 5 (earth symbol)
Voltage range	85...253V AC
Input frequency	47...63 Hz
Current consumption	0.9 A
Ripple	N/A
Input power entrance	Increased safety
Output connectors	Terminals 10...17
Output power	4 x 8.5 W
Inset voltage range	85...253V AC
Voltage U_0	$\leq 9.5\text{V}$
Current I_0	$\leq 1\text{ A}$
C_0 (IIC)	$\leq 500\text{ nF}$
L_0 (IIC)	$\leq 8\text{ }\mu\text{H}$
Output cable resistance max (both directions)	$\leq 0.1\text{ }\Omega$
Isolation path	
Input power to output power	Galvanic to DIN EN50020
Output to output	None
Input power	55 W
Power dissipation	21 W
Thermal dissipation	71.67 BTU/hr
Conductors wire size	4 mm ² (12 gauge) max wire rated for 100 °C (212 °F) or higher 1.2 mm (3/64 in.) insulation max
Dimensions (HxWxD) approx.	140 x 174 x 280 mm (5.51 x 6.9 x 11.0 in.)
Protections class	IP 65/NEMA 7B
Weight (approx.)	7.7 kg (17 lb)

14 FLEX Ex 85...253V AC In/Quad-Ex DC Out Power Supply

Table 2 Environmental Specifications

Attribute	Value

Rockwell Automation Support

Rockwell Automation provides technical information on the Web to assist you in using our products. At <http://support.rockwellautomation.com>, you can find technical manuals, a knowledge base of FAQs, technical and application notes, sample code and links to software service packs, and a MySupport feature that you can customize to make the best use of these tools.

For an additional level of technical phone support for installation, configuration and troubleshooting, we offer TechConnect Support programs. For more information, contact your local distributor or Rockwell Automation representative, or visit <http://support.rockwellautomation.com>.

Installation Assistance

If you experience a problem with a hardware module within the first 24 hours of installation, please review the information that's contained in this manual. You can also contact a special Customer Support number for initial help in getting your module up and running:

United States	1.440.646.3223 Monday – Friday, 8am – 5pm EST
Outside United States	Please contact your local Rockwell Automation representative for any technical support issues.

New Product Satisfaction Return

Rockwell tests all of our products to ensure that they are fully operational when shipped from the manufacturing facility. However, if your product is not functioning and needs to be returned:

United States	Contact your distributor. You must provide a Customer Support case number (see phone number above to obtain one) to your distributor in order to complete the return process.
Outside United States	Please contact your local Rockwell Automation representative for return procedure.
